

Visualizing and Predicting Heart Diseases with an Interactive Dash Board

UNDERSTANDING THE DATASET

Team Id : PNT2022TMID05006

DESCRIPTION:

The leading cause of death in the developed world is heart disease. Therefore, there needs to be work done to help prevent the risks of having a heart attack or stroke. So, this project is based on to prediction of heart disease.

Here, we use this dataset to predict which patients are most likely to suffer from a heart disease in the near future using the features given: [Dataset](#)

Let's understand the data we're working with and give a brief overview of what each feature represents or should represent

COLUMN	DESCRIPTION
Age	Patient's age
Sex	Patient's sex
Chest pain	Number of times the chest pain has occurred
BP	Patient's Blood pressure
cholesterol	Patient's Cholesterol level
FBS over 120	Patient's fasting blood sugar level over 120
EKG results	Electrocardiogram result of the patient
Max HR	Patient's maximum heart rate level
Exercise angina	Pain in the chest because of exercise, stress...etc
ST depression	ST segment depression
Slope of ST	Slope of ST segment
	To diagnose the vessels
Thallium Number of vessels fluro	Thallium test is done for cardiac imaging studies
Heart Disease	Presence/Absence of heart disease

Heart Disease Excel Sheet:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S
1	Age	Sex	Chest pain	BP	Cholesterol	FBS over 128	EKG result	Max HR	Exercise angina	ST depression	Slope of ST-T	Number of vessels	Thallium	Heart Disease
